Experience

Raven Software

Senior Gameplay Engineer | September 2022 - Current

- Shipped three Call of Duty titles.
- Awarded “Raven of the Year” for job excellence.
- Spearheaded the development of a new game mode. Collaborated closely with artists and oversaw production while implementing innovative new gameplay elements.
- Implemented many new gameplay features and systems.
- Debugged and fixed high priority live server crash dumps.
- Fixed several single repro bugs that had not been fixed across multiple ship titles.
- Actively engaged in the play test design and feedback sessions.
- Created design proposals that were accepted and shipped.

Zenimax Online Studios

Gameplay Engineer | November 2018 - August 2022

- Shipped and supported several major expansions for Elder Scrolls Online.
- Delivered new gameplay features including card game AI, item inventory systems, and hot-swappable player builds.
- Maintained and improved combat scripting system and worked closely with design implementing new scripting interfaces.
- Profiled features ensuring they were scalable to MMO proportions.
- Redesigned several legacy systems while maintaining backwards data compatibility.
- Fixed several high priority live bugs and crashes.
- Discovered and corrected major game exploits.

UBS

Software Developer | June 2018 - October 2018

- Implemented JMS (Java messaging service) for automating processes.
- Coordinated with Business Analysts to ensure we were delivering quality software that aligned with client expectations.
- Lead and presented a hackathon project that developed an all-in-one employee onboarding assistance software solution.
- Wrote and debugged many PL/SQL database procedures that analyzed critical customer data.
